Taxonomy

| Kingdom | Phylum | Class | Order | Family |
|----------|----------|----------|----------|------------|
| Animalia | Chordata | Reptilia | Squamata | Lacertidae |

Taxon Name: *Acanthodactylus savignyi* (Audouin, 1809)

Common Name(s):

- English: Savigny's Fringe-fingered Lizard

Assessment Information

Red List Category & Criteria: Near Threatened [ver 3.1](#)

Year Published: 2006

Date Assessed: January 31, 2006

Justification:

Listed as Near Threatened because its extent of occurrence is probably not much greater than 20,000 km², and it probably occurs in several small, widely separated sub-populations, thus making the species close to qualifying for Vulnerable.

Geographic Range

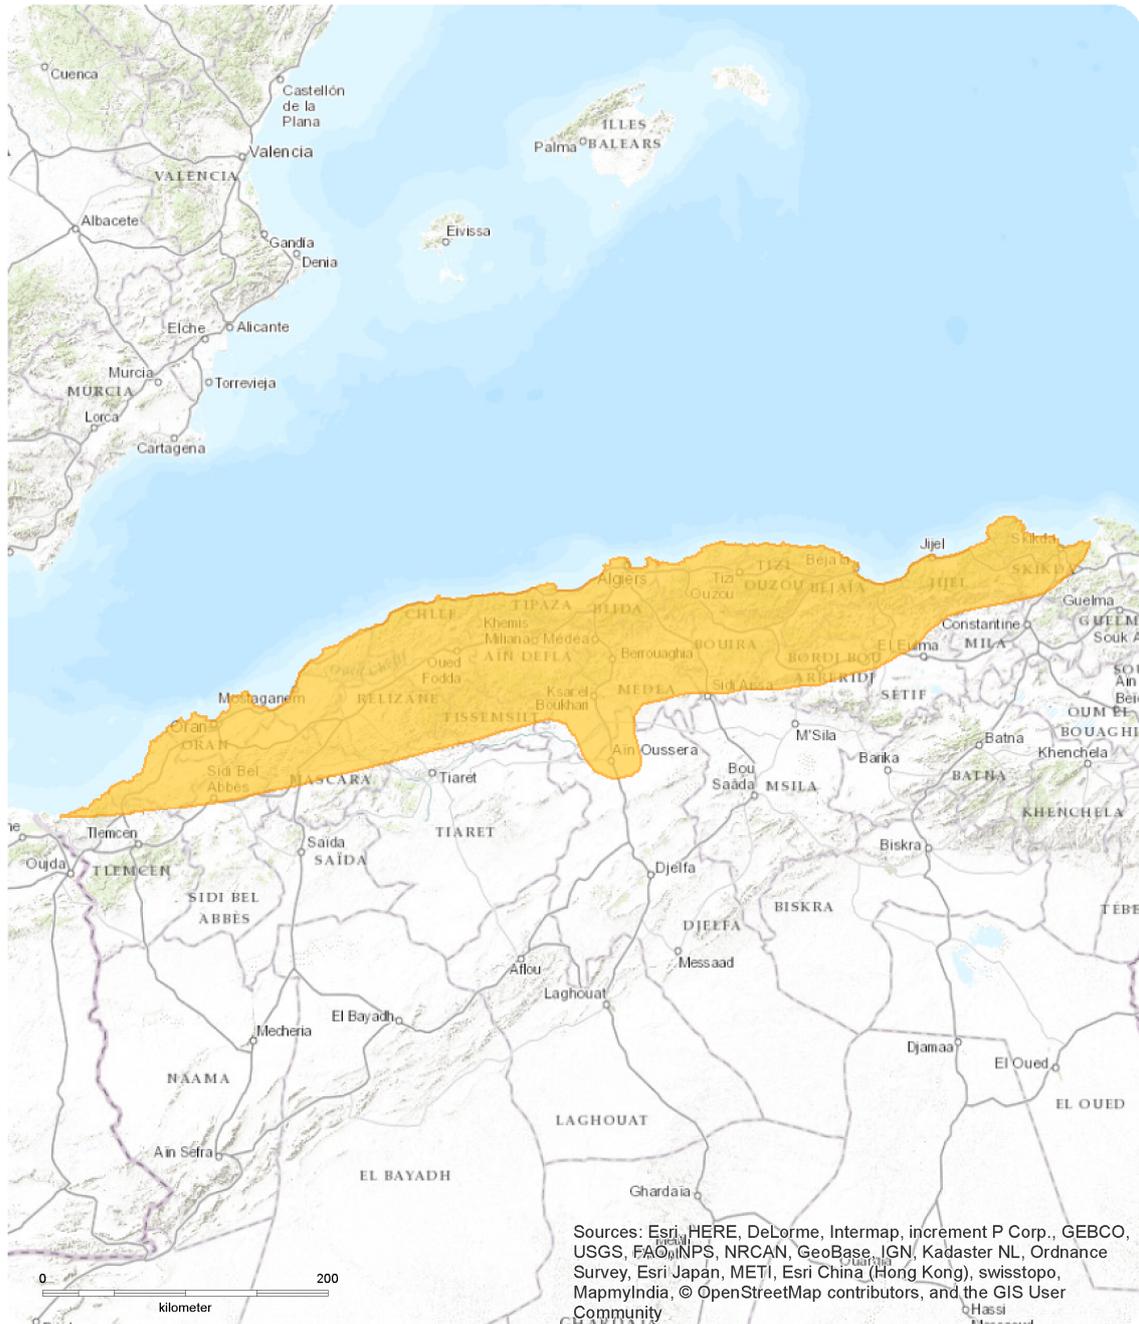

Range Description:

This species is currently considered to be restricted to coastal areas of northern Algeria, although it may possibly also occur in northeastern Morocco. It occurs from sea level up to 500 m asl.

Country Occurrence:

Native: Algeria

Distribution Map

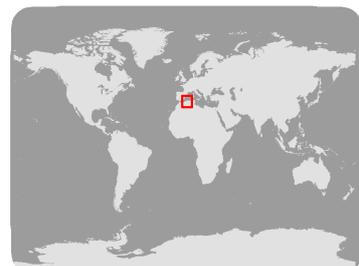

Acanthodactylus savignyi

Range

- Extant (resident)

Compiled by:
IUCN (International Union for Conservation of Nature)

NE DD LC NT VU EN CR EW EX
NEAR THREATENED

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

It is very poorly known and has only been collected in a few sites.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

This species is found in sandy coastal areas and other low elevation Mediterranean habitats. The female lays between four and six eggs.

Systems: Terrestrial

Threats (see Appendix for additional information)

This species is likely to be threatened by the urbanization and coastal tourism.

Conservation Actions (see Appendix for additional information)

It has been recorded from the Chrea National Park in Algeria
